

Help the Hermit Crabs Find a Home!

Hermit crabs are amazing crustaceans! They have shells on their backs that act as their home. Unlike some animals, hermit crabs don't grow these shells themselves and have to find homes. They have to find shells that fit them perfectly though or it will be too big or too small.

It looks like these hermit crabs need some homes. Maybe you can help! Play a scavenger hunt in your house to find homes for our friends. It may be something small like a thimble or big like an empty cup would be perfect for our crabby friends. Look closely though, not all crabs need to find homes to carry with them!
